PROJECTS

Finance Tracking System (Ongoing)

January 2023

Description: A personal finance tracking system built using python and MySQL to maintain a record of inflow and outflow of money. It helps manage finances by taking salary, bonuses, loans, and categorical spending into account.

Password management system

October 2022

Description: A password management system built using python and MySQL to generate new passwords and keep a record of a user's existing passwords and answers to security questions of different websites. It helps manage, search for, and update passwords and copy pastes them to the website for the user.

Electromagnetic Induction in AC Generator

October 2022

Description: Aims to study the effects of Electromagnetic Induction in AC Generator and its applications in the industry.

Effect of Potassium bisulphite as food preservative under various conditions

October 2022

Description: Aims to study the effect of Potassium bisulphite as food preservative under various conditions (temperature, concentration, time, etc.)

Interactive game in python

October 2021

Description: An interactive game of tic-tac-toe developed using python using modules.

Hollow Fiber Membrane and its applications in various sectors

October 2021

Description: Studied the recent developments in state of the art hollow-fiber membranes, including the preparation, applications, and development trends of the membranes, and determined their future effectiveness.
